

KINGLIS BUSINESS X-RAY™

Board Sample Deliverables

Evidence → Intelligence → Decision-Ready Action

BOARD-READY DEMONSTRATION PACK
A representative demonstration of how KINGLIS converts existing organizational evidence into executive clarity, structural diagnosis and sequenced action.

SOS HOLDINGS

Multi-Entity Mining Engineering & Supply Group

Document type	Status	Use
Demonstration case	Sample deliverable pack	Board discussion / capability preview

CONFIDENTIALITY NOTE — SOS Holdings, its people, evidence, circumstances and findings are fictional. No real client information is contained in this sample.
--

Understanding precedes change.

BOARD ORIENTATION

How to read this sample pack before moving into the detailed deliverables.

CONTEXT — SOS Holdings is a fictional multi-entity mining engineering and supply group experiencing increasing operational friction as it grows. The pack demonstrates how a Business X-Ray™ turns existing evidence into board-level explanation and action sequencing.

CENTRAL EXECUTIVE QUESTION — What is causing SOS Holdings to become increasingly difficult to operate across its entities as the group grows?

Board focus	Diagnostic movement	Decision value
Identify what is causing operating friction across the group.	Evidence request → findings → structural map → 90-day action architecture.	Help leadership act on the upstream operating mechanism rather than symptoms.

01	Evidence Request Schedule™	Board purpose
Evidence	Existing records, data and decision trails.	Establish an evidence base before conclusions are drawn.
The purpose of a Business X-Ray™ is not to produce more information about an organization. It is to establish a defensible explanation of what is actually happening before consequential change begins.		

02	Executive Findings Report™	Board purpose
Findings	Evidence-supported explanation of what is happening and why.	Separate symptoms from the material operating mechanism.

03	Structural Intelligence Map™	Board purpose
Structure	How findings connect into one operating architecture.	Show where leadership intervention should focus first.

04	90-Day Action Architecture™	Board purpose
Action	Sequenced actions, owners, gates and proof points.	Move from explanation to a controlled first 90 days.

BUSINESS X-RAY™ EVIDENCE REQUEST SCHEDULE™

SOS Holdings · Client Sample · Fictional Demonstration

Client	Private Reference	Executive Sponsor	Evidence Window
SOS Holdings	BX-SOS-001	Andrew Davies, Chairman	Previous 12 months unless otherwise stated
PURPOSE — Please provide the existing records below where they are reasonably available. KINGLIS does not require new presentations, explanatory decks or documents created for this exercise. Existing operating evidence is preferred.			

Evidence requested

#	Evidence class	Please provide	Period / sample	Priority	Likely owner
01	Group & entity structure	Current group structure; entity organization charts; reporting lines; legal/entity overview.	Current versions	HIGH	Group / Company Secretariat
02	Roles & authority	Role descriptions for executive and material operational roles; delegation/approval schedules; reserved matters.	Current + prior version if changed	HIGH	Chairman / HR / Finance
03	Governance & decisions	Relevant board/management minutes; decision logs; approval records for material operating decisions.	12 months	HIGH	Executive Office / Finance
04	Procurement & supplier flow	Procurement procedure; purchase requisitions/orders; approval trails; supplier exceptions; selected delayed/urgent cases.	6–12 months	HIGH	Procurement / Finance
05	Commercial & quotation flow	Quotation/pricing approval rules; selected quotations; discount/margin exceptions; CRM opportunity records.	6–12 months	HIGH	Commercial / Sales
06	Project mobilization	Mobilization procedure/checklists; handoff records; project start approvals; selected delayed or escalated mobilizations.	6–12 months	HIGH	Operations / Projects
07	Performance & management reporting	KPI packs; aged actions; delivery/OTIF measures; procurement cycle time; margin/performance reports.	6–12 months	MED–HIGH	Finance / Operations
08	Systems & workflow records	Relevant ERP, CRM or workflow exports showing status, approvals, handoffs and timestamps for sampled work.	Sample period agreed with KINGLIS	HIGH	Systems Owner / Finance
09	Organizational memory	Decision/exception records; shared-drive folders; recurring operating trackers; handover or continuity records.	Current + representative historic examples	MEDIUM	Operations / Executive Office
10	Internal operating communications	Selected email/message chains relating to sampled approvals, exceptions, delays or cross-entity coordination.	Only targeted threads requested	TARGETED	Relevant custodians

How to provide it

Instruction	Client guidance
Use existing records	Do not create new documents for KINGLIS unless specifically requested.
Preserve source context	Where possible, retain original filenames, dates, authors/owners and system exports.
Do not over-collect	Provide the requested categories only. KINGLIS may narrow or extend individual requests after initial review.
Sensitive material	Flag commercially sensitive, legally restricted or personal material before transfer. Do not provide privileged material unless specifically agreed.
Missing evidence	If a requested record does not exist, state “Not available / does not exist.” The absence itself may be relevant and should not be disguised.
Secure transfer	Use the secure route specified in the Client Onboarding Pack. Do not send confidential evidence through the public intake form.

Initial evidence schedule

Stage	Client action	KINGLIS action	Target
Initial submission	Provide available HIGH-priority evidence classes 01–08.	Register, classify and test initial sufficiency.	Within 5 business days
Gap clarification	Respond to targeted questions or missing-record requests.	Issue only material follow-up requests.	Within 2 business days of request
Targeted sampling	Provide selected communications / cases where requested.	Test contradictions, operating reality and workflow behaviour.	As requested
Evidence sufficiency	No further broad submission unless requested.	Confirm whether evidence is sufficient to proceed to full diagnostic reconstruction.	KINGLIS controlled gate
CENTRAL EXECUTIVE QUESTION — What is causing SOS Holdings to become increasingly difficult to operate across its entities as the group grows? Every evidence request must remain materially connected to this question or to a proposition arising from the evidence.			

BUSINESS X-RAY™
EXECUTIVE FINDINGS REPORT™

SOS Holdings · Final Client Deliverable · Fictional Demonstration

CENTRAL EXECUTIVE QUESTION — What is causing SOS Holdings to become increasingly difficult to operate across its entities as the group grows?

Executive answer

EXECUTIVE ANSWER — The problem is not primarily workload. It is operating ambiguity.

STRUCTURAL CONDITION	OPERATING PATTERN	FIRST RESPONSE
SOS has grown faster than its operating architecture. It behaves commercially as a multi-entity group while key decisions still operate like a smaller founder-led enterprise.	Managers appear accountable but cannot always close decisions. Cross-entity work moves through informal escalation and context remains stored in people.	Do not begin with restructure, ERP replacement or more layers. First make decision rights executable, assign end-to-end owners and create durable records.

Executive read

Overall condition	Primary constraint	Material consequence	Immediate requirement
Growth has outpaced operating architecture.	Delegation exists, but practical decision risk remains concentrated.	Routine work escalates upward and across entities.	Make authority executable and require durable decision records.
Evidence confidence — HIGH for sampled workflows; MODERATE for group-wide generalization beyond the examined scope.			

What KINGLIS examined

Entities	Functions	Period	Stakeholders	Exclusions
Group, Engineering, Mining Supply, Projects	Operations, Commercial, Procurement, Finance, Executive Leadership	Previous 12 months	Chairman, finance, operations, commercial, procurement and managers	Technical quality, statutory assurance, financial audit, HR casework

Evidence base

Formal structure	Decision records	Workflow evidence
4 organization charts, 17 role descriptions and entity authority schedules.	Board and management minutes, 31 approval trails and selected email and messaging decision chains.	Purchase-to-pay, quotation-to-order, project mobilization and customer escalation records.
Performance evidence	Systems	Interviews
Delivery, margin, procurement cycle-time and aged-action reports.	ERP extracts, shared-drive records, approval logs and CRM snapshots.	9 structured stakeholder interviews.

Evidence boundary

BOUNDARY — The analysis distinguishes formal organizational design from observed operating reality. Findings are bounded to the evidence and workflows examined and do not assume that every SOS process or entity behaves identically.

Material finding 01

ACCOUNTABILITY EXCEEDS EXECUTABLE AUTHORITY

Finding summary — Managers are formally accountable for outcomes that they cannot consistently authorize or close without informal senior confirmation.

Observation	Interpretation	Consequence	Confidence
In 22 of 31 sampled approval trails, the named accountable manager sought confirmation outside the documented approval path.	Delegation is formally present but psychologically and operationally incomplete; decision risk remains centralized.	Routine decisions wait, accountability becomes ambiguous, and senior leaders remain embedded in operational closure.	HIGH
Evidence basis — Authority schedules, approval trails, management minutes and interview convergence across Operations, Procurement and Commercial. Boundary: sampled commercial, procurement and mobilization decisions only.			

Material finding 02

CROSS-ENTITY WORKFLOWS HAVE PARTICIPANTS, BUT NOT ONE END-TO-END OWNER

Finding summary — The highest-friction workflows cross legal entities and functions without a single accountable owner for the full outcome.

Observation	Interpretation	Consequence	Confidence
Purchase-to-pay and project mobilization each involved four to six roles across entities. Ownership changed at handoffs.	Responsibility is locally clear but systemically fragmented.	Each participant can complete their task while the overall outcome remains late, incomplete or unclosed.	HIGH
Evidence basis — Workflow reconstruction, handoff records, overdue action logs, stakeholder interviews and sampled transaction chronologies.			

Material finding 03

CRITICAL OPERATING CONTEXT IS STORED IN PEOPLE, NOT RELIABLY IN THE ORGANIZATION

Finding summary — Several recurring decisions depend on experienced individuals reconstructing context from memory, prior messages or personal knowledge.

Observation	Interpretation	Consequence	Confidence
Exceptions, supplier history and prior commercial decisions were frequently explained through individuals rather than retrievable decision records.	Organizational memory is uneven. Records capture transactions more reliably than the reasoning behind exceptions and commitments.	Absence, turnover or growth increases rework and the probability of inconsistent decisions.	MODERATE-HIGH

Evidence basis — Document retrieval tests, decision trails, stakeholder interviews and repeated inability to locate rationale for selected exceptions. **Boundary:** transactional records exist; the weakness is principally in context, rationale and exception memory.

Material finding 04

REPORTING DESCRIBES PERFORMANCE AFTER THE FACT BUT DOES NOT RELIABLY EXPOSE DECISION BLOCKAGE

Finding summary — Management reporting shows outputs and overdue items, but not where work is waiting for authority, information or cross-entity closure.

Observation	Interpretation	Consequence	Confidence
KPI packs showed late orders and aged actions but did not distinguish capacity delay from approval, information or handoff delay.	Leadership sees symptoms later than the mechanism that creates them.	Management attention is directed toward recovery rather than prevention, and recurring structural friction can appear to be a people-performance problem.	HIGH for the reports examined

Evidence basis — KPI packs, aged-action reports, sampled workflow timing and management meeting records.

Cross-finding synthesis

FOUR FINDINGS. ONE STRUCTURAL MECHANISM.

SYNTHESIS — SOS Holdings has distributed work across a larger group without fully distributing the authority, operating memory and end-to-end ownership required to make that distribution self-sustaining.

Authority	Ownership	Memory	Reporting
When managers cannot confidently exercise authority, they escalate.	When workflows lack one end-to-end owner, escalation becomes the closure mechanism.	When rationale is not durably recorded, senior people repeatedly reconstruct context.	When reporting misses blockages, the organization responds to lateness rather than architecture.
Conclusion — What looks like separate operational problems is better explained as a smaller number of connected structural conditions.			

Material contradictions resolved

Formal position	Operating evidence	KINGLIS conclusion
Entity managers have delegated purchasing authority.	Most sampled material purchases still sought group-level reassurance outside the formal schedule.	Authority is delegated formally but not consistently executable in practice.
Each department owns its part of the process.	No role owned the complete purchase-to-pay or mobilization outcome across handoffs.	Local responsibility does not equal end-to-end accountability.
The ERP contains the business record.	Transactions were present, but rationale for exceptions and prior commitments often remained in messages or individual memory.	The system records activity better than organizational reasoning.

What this does not mean

CLARIFICATION — This does not mean SOS needs more bureaucracy, that senior leaders should stop being involved in genuinely exceptional decisions, or that existing systems are necessarily inadequate. It means the organization must distinguish routine delegated authority from true exceptions and create reliable closure around cross-entity work.

What we would not change yet

Do not change yet	Reason
Group-wide restructure	The principal failure is not yet shown to be the boxes on the organization chart. It is the executability of authority and ownership across them.
New ERP or workflow platform	Digitizing ambiguous decision rights would automate ambiguity rather than resolve it.
Additional middle-management layer	More managers may create more handoffs unless decision closure and end-to-end accountability are first defined.

KINGLIS executive position

KINGLIS EXECUTIVE POSITION — SOS Holdings does not first need more management activity. It needs a clearer relationship between authority, accountability, organizational memory and cross-entity ownership.

BUSINESS X-RAY™
STRUCTURAL INTELLIGENCE MAP™

SOS Holdings · Final Client Deliverable · Fictional Demonstration

Client	Private Reference	Central Executive Question
SOS Holdings	BX-SOS-001	What is causing SOS Holdings to become increasingly difficult to operate across its entities as the group grows?
EXECUTIVE READ — SOS has distributed work across a larger multi-entity group without fully distributing the authority, operating memory and end-to-end ownership required to make that distribution self-sustaining.		

The structure behind the symptoms

UPSTREAM CONDITION	DECISION MECHANISM	EXECUTION PATH
Formal responsibility has moved into entities and functions, but decision thresholds and exceptions are not consistently executable.	Managers seek informal senior confirmation when decisions carry commercial, supplier or delivery risk.	Cross-entity work moves through messages, calls and individual follow-up rather than one controlled end-to-end path.

STRUCTURAL CONSTRAINT	OBSERVED EFFECT	EXECUTIVE CONSEQUENCE
Accountability is assigned without sufficient authority, information and closure mechanisms.	Escalation, rework, delayed approvals, duplicated checking and dependence on experienced individuals.	Senior capacity is consumed by routine coordination; growth increases friction rather than leverage.

Executive implication

What leadership can now see	What should happen first	What should wait
The recurring symptoms share one upstream operating architecture rather than representing unrelated departmental failures.	Make decision rights executable and assign one accountable owner to the three highest-friction cross-entity workflows.	Group-wide restructure, major ERP replacement and additional management layers until the upstream operating model is stabilized.

Evidence confidence: HIGH for sampled workflows; MODERATE for group-wide generalization beyond examined scope.

BUSINESS X-RAY™
90-DAY ACTION ARCHITECTURE™

SOS Holdings · Final Client Deliverable · Fictional Demonstration

OBJECTIVE — By Day 90, routine authority should be executable without shadow escalation, the three critical cross-entity workflows should have one accountable owner each, and material exceptions should leave a durable decision record.

0–30 / 31–60 / 61–90

0–30 DAYS — STABILIZE & DECIDE	31–60 DAYS — BUILD & SHIFT	61–90 DAYS — EMBED & VERIFY
A01 Approve executable decision-rights schedule for procurement, commercial exceptions and project mobilization. Owner: Chairman / Group Executive Proof: signed schedule + thresholds communicated	A03 Run all three workflows under named end-to-end owners. Owner: Workflow Owners Proof: live cases completed through new path	A05 Compare escalation rate, approval latency and cycle time against baseline. Owner: Group Operations Proof: 30-day comparative measures
A02 Name one accountable owner per workflow and define the true exception path. Owner: Group Executive Proof: owner mandate + escalation rules	A04 Introduce minimum decision/exception record and blockage coding. Owner: Finance / Operations systems owner Proof: sampled decisions retrievable with rationale	A06 Close residual gaps and transfer controls into normal management cadence. Owner: Group Executive Proof: recurring review + no shadow process

Leadership decision gates

Decision	Owner	Required by	If unresolved
Which decision classes remain genuinely reserved to Group/Chairman?	Andrew Davies / Group Executive	Day 10	Managers cannot distinguish delegation from exception; informal escalation persists.
Who owns purchase-to-pay, quotation-to-order and project mobilization end-to-end?	Group Executive	Day 15	Handoffs remain locally owned but systemically unowned.
What minimum rationale must be recorded for material exceptions?	Group Finance + Operations	Day 25	Organizational memory continues to depend on individuals.

Review evidence

Review	What should now be true	Evidence
Day 30	Authority and ownership are explicit and usable.	Approved schedules; owner mandates; exception rules.
Day 60	The new paths are operating in live work.	Completed cases; blockage codes; decision records.
Day 90	The new operating state is embedded and measurable.	Lower escalation/latency; retrievable rationale; recurring management review.
DO NOT LAUNCH YET — a group-wide restructure, ERP replacement or additional management layer. The evidence does not establish these as the upstream remedy.
